

## VIP of the Month

### Stanley Bramston

Stanley a 5 year old male cat was brought to us with vomiting and diarrhoea a common problem, but Stanley's case was more challenging than most. Stanley was unwell for 2 ½ weeks, he had to have lots of tests and an exploratory operation to try and discover what was causing his problems. It took quite a bit of work by our Veterinary surgeons and Nurses to reach a diagnosis and get Stanley on his way to recovery.

Stanley had to put up with quite a lot, throughout his time with us he remained good natured and was always keen for some fuss and a cuddle. Stanley is now doing very well, he is a very deserving Very Important Pet.
